

ZERUST®/EXCOR® VCI Coil Packaging

Fitted custom ZERUST® VCI coil cover with the elastic band placed over the skid before the coil is placed onto the skid.

ZERUST® VCI coil cover is pulled up over the bottom of the coil.

The finished packaging includes a ZERUST® VCI coil cover on the bottom and the top of the coil. Then the operator uses ZERUST® VCI machine stretch film to wrap and enclose the complete packaging before banding is used to secure the coil to the skid.

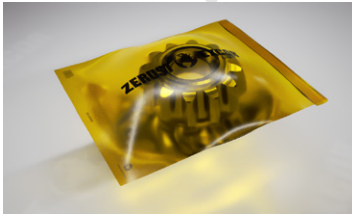

ZERUST® VCI coil covers can be made to fit various sizes of metal coils.

The example above was done with aluminum coils. However, this system can be done with steel, galvanized, and many other common metal types. Contact ZERUST®/EXCOR® for a comprehensive corrosion management solution to meet your needs.

Worldwide Corrosion Management Solutions

Offering ZERUST® Corrosion Solutions
